DETAILED ACTION

1. Applicant's amendments filed on 5/26/2009 has been received and entered in the case.
2. Applicant's remarks with respect to the claims have been considered.
3. The new abstract filed on 5/26/2009 has been entered.
4. The replacement sheet of drawings figures 3, 6 and 7 were received on 5/26/2009. These sheets of drawings are acceptable.

Allowable Subject Matter

5. Claims 1 and 2 are allowed.
6. The following is an examiner's statement of reasons for allowance:

Claim 1: In view of the limitations the prior art does not fairly disclose alone or in combination a speed control method of an elevator purpose inverter for controlling an induction motor in an acceleration, constant and deceleration manner, wherein when an elevator car reaches a decelerating starting position located at a constant distance from an arriving floor position, it decelerates in a constant deceleration speed in a deceleration control manner. The speed control method includes the steps of previously calculating an elevating distance when the elevator car is decelerated from a reference frequency up to a leveling frequency in a constant deceleration speed, when the motor is stopped; driving the elevator car in a constant speed at an intermediate frequency so that the previously calculated distance becomes equal to an elevating distance

when the elevator car is decelerated from an arbitrary frequency up to the leveling frequency so as to adjust the elevating distance; and automatically decelerating the elevator car at the constant speed up to the leveling frequency.

Claim 2: The examiner has interpreted the wording "member for" as a means plus function as stated in U.S.C. 112th 6 paragraph. The prior art does not fairly disclose or suggest a speed control apparatus with the similar limitations as claim 1 above.

The closest prior art of Sakurai '347 discloses a method and apparatus for controlling the speed of an elevator car when a deceleration stop command is inputted, however there is no teaching or suggestion to calculate a previous elevating distance when the elevator car is decelerated from a reference frequency up to a leveling frequency in a constant deceleration speed and to drive the elevator car in a constant speed so that the previously calculated distance becomes equal to an elevating distance.

Conclusion

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
